ΠΕΡΙΣΤΑΛΤΙΚΕΣ ΑΝΤΛΙΕΣ

PERISTALTIC PUMPS

Manufacturer: Revello

Manufacturer: Revello

Revello peristaltic pumps are based on the principle of peristalsis according to which the prevalence of the fluid treated is given by a crushing sliding along the pipe. With this method, more or less dense liquids are transported in a delicate and soft manner.

The pumps are suitable for the pouring of liquids (wine, fruit juices, milk, and oil) and semisolid products (crushed and intact grapes, grapes after the removal of stalks). The pumps consist of a rotor bearing two rollers which compress the rubber pipe, while rotating, causing the advancement of the liquid. Alternating between compression and decompression of the pipe generates a vacuum which sucks the product resulting in a constant flow.

The advantages of this type of pumps produce a delicate pumping process that prevents oxidization, shaking emulsions, crushing of berries and seeds, and contacts between the product and mechanical parts.

- Stainless steel pump body AISI 304
- Rotor with two rolls mounted on bearings
- Motor reducer directly applied on the bearing element
- AISI 304 stainless steel self supporting stand
- Control panel with reverse feature
- Double pipe of rubber for use in the food industry
- "Inverter" electronic speed variator
- Expansion tank
- Safety pressure swtich
- Automatic lubrification of the rubber pipe

Optionals

- Hopper
